

### The Apex Theatre Bury St Edmunds

**Manufacture and Supply of External Stairs, External Balcony Balustrade, Internal Doors, Frames and Acoustic Ceiling Panels. Also Supply of Internal Balustrades and Bar Counters.**

Quality was key to the success of this project with a mix of timber species being carefully harmonized. The two heated External Staircases manufactured in treated softwood flank either side of the main entrance to the theatre foyer.

Inside, on the upper level, there is a combination of Siberian Larch used for the construction of the Internal Balustrade to the Public Area and American Oak used in the construction of the three striking bars which were designed, manufactured and installed by Coulson Joinery. The state of the art theatre is predominately finished in American Oak.

The Acoustic Ceiling Panels to the roof space were manufactured in a modular form by Coulson Joinery and factory finished in Class "O" fire protection lacquer in order to comply with current building regulations.

### Key facts:

Client:  
**St Edmundsbury  
Borough Council**

Main contractor:  
**Haymills/Vinci**

Value:  
**£300,000**
